

# TECHNICAL DATA SHEET

## DIESEL CETANE BOOSTER

### DESCRIPTION

Diesel Cetane Booster is a fuel additive for all diesel engines for improving ignition performance. Increases the cetane rating of the diesel fuel depending on the dosage and therefore, increases engine performance. Eliminates disturbing noises in diesel engines and reduces the carbon formation . ensures clean combustion , provides optimum lubrication of all moving parts in diesel system and protects reliably against corrosion

### BENEFITS

- ✓ Improved cold start performance and ignition quality
- ✓ Reduces engine noises Improved Fuel Economy
- ✓ Clean combustion of fuel

### TYPICAL CHARACTERISTICS

<b>Base :</b>	Additives in carrier liquid
<b>Color :</b>	Yellowish
<b>Density at 15°C :</b>	0.835 g/cm
<b>Flash point :</b>	62°C

### USE DIRECTION

Pour the contents of the container into the full tank . The normal dosage is one 250 ml can for 120 liters of fuel. The dosage depends on the cetane rating of the initial fuel used and the desired cetane rating in the ultimate fuel.

Use with each tankful, to improve performance

**The above mentioned typical data are approximate values based on current production and can be subject of allowable production tolerances**
